

Tytan Net Wrap

Last Updated Wednesday, 08 October 2008

Netwrap has fast become an important alternative to baler twine. Netwrap provides the user with more bale coverage, thus preventing spoilage and it allows for easier handling. The single largest benefit of easier bale handling is a reduction in waste.

Tytan stocks both conventional edge to edge netwrap and netwrap that goes over the edge. We stock net in all of the traditional lengths and we now stock it in long length versions. Each roll comes with an end of roll marking.
